

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1. (Currently amended) A multilayer thermoplastic resin film comprising an intermediate layer and a printing layer positioned on one surface or both surfaces of said intermediate layer,

wherein said intermediate layer contains a non-transfer antistatic agent, and said printing layer does not contain the non-transfer antistatic agent and has a printing surface having a surface resistivity of from  $1 \times 10^8$  to  $1 \times 10^{14} \Omega$ .

2. (previously presented): The multilayer thermoplastic resin film of claim 1, wherein the thermoplastic resin film is stretched in at least a uniaxial direction.

3. (canceled).

4. (previously presented): The multilayer thermoplastic resin film of claim 1, wherein the printing layer has a printing surface having an ink adhesion strength of from 0.5 to 10 kg•cm.

5. (previously presented): The multilayer thermoplastic resin film of claim 1, wherein a printing surface of the printing layer is subjected to an activation treatment.

6. (previously presented): The multilayer thermoplastic resin film of claim 5, wherein after subjecting the printing surface to the activation treatment, a coating agent layer having an ink adhesion property is provided.

7. (previously presented): The multilayer thermoplastic resin film of claim 1, wherein the multilayer thermoplastic resin film contains inorganic fine powder and/or organic filler.

8. (previously presented): The multilayer thermoplastic resin film of claim 1, wherein the non-transfer antistatic agent includes a polyamide copolymer as a main component.

9. (previously presented): The multilayer thermoplastic resin film of claim 8, wherein the non-transfer antistatic agent includes a polyether ester amide as a main component.

10. (previously presented): The multilayer thermoplastic resin film of claim 9, wherein the intermediate layer comprises:

component (a): thermoplastic resin in an amount of from 5 to 95% by weight,

component (b): polyether ester amide in an amount of from 5 to 35% by weight,

component (c): polyamide resin in an amount of from 0 to 20% by weight, and

component (d): inorganic fine powder and/or organic filler in an amount of from 0 to 70% by weight.

11. (previously presented): The multilayer thermoplastic resin film of claim 10, wherein the component (a) of the intermediate layer is a polyolefin resin.

12. (previously presented): The multilayer thermoplastic resin film of claim 10, wherein the intermediate layer further comprises from 0.01 to 5% by weight of a metallic salt as a component (e).

13. (previously presented): The multilayer thermoplastic resin film of claim 10, wherein the intermediate layer further comprises from 0.5 to 20% by weight of an ionomer as component (f).

14. (previously presented): The multilayer thermoplastic resin film of claim 10, wherein the intermediate layer further comprises 1 to 20% by weight of a modified low molecular weight polyolefin as a component (g).

15. (previously presented): The multilayer thermoplastic resin film of claim 5, wherein after subjecting the printing surface to the activation treatment, a pigment coating layer is provided.

16. (previously presented): The multilayer thermoplastic resin film of claim 1, wherein the intermediate layer comprises:

component (a): thermoplastic resin in an amount of from 5 to 95% by weight,  
component (b): polyether ester amide in an amount of from 5 to 35% by weight,  
component (c): polyamide resin in an amount of from 0 to 20% by weight, and  
component (d): inorganic fine powder and/or organic filler in an amount of from 0 to  
70% by weight.

17. (previously presented): The multilayer thermoplastic resin film of claim 16,  
wherein the component (a) of the intermediate layer is a polyolefin resin.

18. (previously presented): The multilayer thermoplastic resin film of claim 16,  
wherein the intermediate layer further comprises from 0.01 to 5% by weight of a metallic salt as  
a component (e).

19. (previously presented): The multilayer thermoplastic resin film of claim 16,  
wherein the intermediate layer further comprises from 0.5 to 20% by weight of an ionomer as a  
component (f).

20. (previously presented): The multilayer thermoplastic resin film of claim 16,  
wherein the intermediate layer further comprises 1 to 20% by weight of a modified low  
molecular weight polyolefin as a component (g).
